1 Introduction

systemPipeR is a pipeline for running command-line software, such as NGS aligners, on both single machines or compute clusters. It supports interactive job submissions or batch submissions to queuing systems of clusters (tested only with Torque). Currently, the following command-line aligners are supported: TopHat 2 (Kim et al., 2013) and Bowtie 2 (Langmead and Salzberg, 2012).

7	References	5

2 Getting Started

2.1 Installation

The R software can be downloaded from CRAN (<http://cran.at.r-project.org/>) and the *systemPipeR* package from GitHub (<https://github.com/tgirke/systemPipeR>). The *systemPipeR* package can be installed from R using the `install.packages` command after downloading and uncompressing the package directory.

```
> system("R CMD build systemPipeR") # Builds package
> install.packages("systemPipeR.1.0.0.tar.gz", repos=NULL, type="source") # Installs the package
```

2.2 Loading the Package and Documentation

```
> library("systemPipeR") # Loads the package
> library(help="systemPipeR") # Lists all functions and classes
> vignette("systemPipeR") # Opens this PDF manual from R
```

3 Structure of targets file

The targets file defines all samples and comparisons of the analysis workflow. The following shows the format of a sample targets file provided by this package.

```
> library(systemPipeR)
> targetspath <- paste0(system.file("extdata", package="systemPipeR"), "/targets.txt")
> read.delim(targetspath, comment.char = "#")
```

	FileName	SampleName	Factor	SampleLong	Experiment	Date
1	/my/path/CGA.fq.gz	C1	C	Ctrl1	1	11-Oct-13
2	/my/path/TTA.fq.gz	C2	C	Ctrl1	1	11-Oct-13
3	/my/path/ACT.fq.gz	B1	B	Treat1	1	11-Oct-13
4	/my/path/GCC.fq.gz	B2	B	Treat1	1	03-Mar-14
5	/my/path/CGA.fq.gz	D1	D	Treat2	1	03-Mar-14
6	/my/path/TTA.fq.gz	D2	D	Treat2	1	03-Mar-14
7	/my/path/TGA.fq.gz	E1	E	Treat3	1	03-Mar-14
8	/my/path/ACA.fq.gz	E2	E	Treat3	1	03-Mar-14

Structure of targets file for paired end (PE) samples.

```
> library(systemPipeR)
> targetspath <- paste0(system.file("extdata", package="systemPipeR"), "/targetsPE.txt")
> read.delim(targetspath, comment.char = "#")
```

	FileName1	FileName2	SampleName	Factor	SampleLong	Experiment	Date
1	/my/path/CGA1.fq.gz	/my/path/CGA2.fq.gz	C1	C	Ctrl1	11-Oct-13	
2	/my/path/TTA1.fq.gz	/my/path/TTA2.fq.gz	C2	C	Ctrl1	11-Oct-13	
3	/my/path/ACT1.fq.gz	/my/path/ACT2.fq.gz	B1	B	Treat1	1	11-Oct-13
4	/my/path/GCC1.fq.gz	/my/path/GCC2.fq.gz	B2	B	Treat1	1	03-Mar-14
5	/my/path/CGA1.fq.gz	/my/path/CGA2.fq.gz	D1	D	Treat2	1	03-Mar-14
6	/my/path/TTA1.fq.gz	/my/path/TTA2.fq.gz	D2	D	Treat2	1	03-Mar-14
7	/my/path/TGA1.fq.gz	/my/path/TGA2.fq.gz	E1	E	Treat3	1	03-Mar-14
8	/my/path/ACA1.fq.gz	/my/path/ACA2.fq.gz	E2	E	Treat3	1	03-Mar-14

Comparisons are defined in the header lines of the targets starting with '# <CMP>'. The function readComp imports the comparison and stores them in a list.

```
> readComp(file=targetspath, format="vector", delim="-")
```

```
$CMPset1
[1] "C-B" "C-D" "C-E"
```

```
$CMPset2
[1] "B-D" "D-E"
```

4 Workflow

4.1 Define environment settings and samples

Load packages and functions

```
> library(systemPipeR)
> library(BSgenome); library(Rsamtools); library(rtracklayer); library(GenomicFeatures); library(Gviz); library(Gviz)
```

```

> library(BiocParallel)
> txdb <- loadDb("./data/My_species.sqlite")
> eByg <- exonsBy(txdb, by="gene")
> bams <- names(bampaths); names(bams) <- targets$SampleName
> bfl <- BamFileList(bams, yieldSize=50000, index=character())
> multicoreParam <- MulticoreParam(workers=4); register(multicoreParam); registered()
> counteByg <- bplapply(bfl, function(x) summarizeOverlaps(gff, x, mode="Union", ignore.strand=TRUE, inter
> countDFeByg <- sapply(seq(along=counteByg), function(x) assays(counteByg[[x]])$counts)
> rownames(countDFeByg) <- names(rowData(counteByg[[1]])); colnames(countDFeByg) <- names(bfl)
> rpkmDFeByg <- apply(countDFeByg, 2, function(x) returnRPKM(counts=x, gffsub=eByg))
> write.table(assays(countDFeByg)$counts, "results/countDFeByg.xls", col.names=NA, quote=FALSE, sep="\t")
> write.table(rpkmDFeByg, "results/rpkmDFeByg.xls", col.names=NA, quote=FALSE, sep="\t")

```

4.5 Read counting for miRNA profiling experiments

Download miRNA genes from miRBase

```

> system("wget ftp://mirbase.org/pub/mirbase/19/genomes/My_species.gff3 -P ./data/")
> gff <- import.gff("./data/My_species.gff3", asRangedData=FALSE)
> gff <- split(gff, elementMetadata(gff)$ID)
> bams <- names(bampaths); names(bams) <- targets$SampleName
> bfl <- BamFileList(bams, yieldSize=50000, index=character())
> countDFmiR <- summarizeOverlaps(gff, bfl, mode="Union", ignore.strand=FALSE, inter.feature=FALSE) # Note
> rpkmDFmiR <- apply(countDFmiR, 2, function(x) returnRPKM(counts=x, gffsub=gff))
> write.table(assays(countDFmiR)$counts, "results/countDFmiR.xls", col.names=NA, quote=FALSE, sep="\t")
> write.table(rpkmDFmiR, "results/rpkmDFmiR.xls", col.names=NA, quote=FALSE, sep="\t")

```

4.6 Correlation analysis of samples

```

> library(ape)
> rpkmDFeByg <- read.table("./results/rpkmDFeByg.xls", check.names=FALSE)
> rpkmDFeByg <- rpkmDFeByg[rowMeans(rpkmDFeByg) > 50,]
> d <- cor(rpkmDFeByg, method="spearman")
> hc <- hclust(as.dist(1-d))
> plot.phylo(as.phylo(hc), type="p", edge.col="blue", edge.width=2, show.node.label=TRUE, no.margin=TRUE)

```

4.7 DEG analysis with edgeR

```

> targetspath <- paste0(system.file("extdata", package="systemPipeR"), "/targets.txt")
> targets <- read.delim(targetspath, comment.char = "#")
> (cmp <- readComp(file=targetspath, format="matrix", delim="-"))

$CMPset1
  [,1] [,2]
[1,] "C"  "B"
[2,] "C"  "D"
[3,] "C"  "E"

$CMPset2
  [,1] [,2]
[1,] "B"  "D"
[2,] "D"  "E"

> edgeDF <- run_edgeR(countDF=countDF, targets=targets, cmp=cmp[[1]], independent=TRUE, mdsplot="")

```

5 Version Information

```
> toLatex(sessionInfo())
```

- R version 3.0.2 (2013-09-25), x86_64-unknown-linux-gnu
- Locale: C
- Base packages: base, datasets, grDevices, graphics, methods, parallel, stats, utils
- Other packages: BiocGenerics 0.8.0, Biostrings 2.30.1, GenomicRanges 1.14.2, IRanges 1.20.1, Rsamtools 1.14.2, ShortRead 1.20.0, XVector 0.2.0, lattice 0.20-24, systemPipeR 1.0.1
- Loaded via a namespace (and not attached): Biobase 2.22.0, BiocStyle 1.0.0, RColorBrewer 1.0-5, bitops 1.0-6, grid 3.0.2, hwriter 1.3, latticeExtra 0.6-26, stats4 3.0.2, tools 3.0.2, zlibbioc 1.8.0

6 Funding

This software was developed with funding from the National Science Foundation: [MCB-1021969](#) .
